**1**

### Testing

Find out what they know before starting a topic. Don't force them to sit through work they already know, offer reading time or extension instead.

Be prepared to have extension work (not just more of the same) for those that test well and do not need to cover the work again.

**2**

### Voice and Choice

Allow students to have a voice in what they learn. Even a small choice is better than none so make sure you give them options even if it cannot be fully their own choice.

**3**

### Interests

Learn what interests the student has, then give them the option to tailor work to their passion. Let them pursue their interests whatever they may be.

Let them choose their way of presenting work. For example in a module on the environment they could do a practical research project or recreate an environment in Minecraft.
